USP HOMECOMING CONFERENCE 2017

The University of Science and Philosophy is pleased to announce that tickets are now on sale for the Homecoming Conference 2017.

We have a tremendous line-up of amazing speakers who will be presenting on the history, philosophy and science of the Russells. You do not want to miss this amazing event! Tickets are only $150.00 for TWO FULL DAYS! This event will take place at the historic Wayne Theatre in downtown Waynesboro, VA.

To ORDER TICKETS directly, please visit the following link:

Please secure your lodging a.s.a.p. Attendees are encouraged to arrive Friday October 6th and depart Monday October 9th, 2017.

For lodging in and around Waynesboro, VA visit the following links:

Carrying the Torch for the Russell Legacy
By Matt Presti – President, USP

The USP is moving full steam ahead with our aims and goals. I am pleased to announce the addition of our new Chief Science Officer, Darren Colomb. Darren has worked very hard in a volunteer capacity over the last two years with the USP Science and Research Committee, as its Lead Scientist, in our efforts to deliver empirical validation of the Russell scientific concepts as well as developing and testing new power multiplication technologies and prototypes. It is a great honor to welcome him aboard in an OFFICIAL capacity.

Several members of the Science and Research Committee are gearing up to attend and present at the TeslaTech Conference in Albuquerque, New Mexico, July 26th – July 30th, 2017. We hope you’ll join us! For more information, please visit the following link - http://www.philosophy.org/news/tesla-tech-2017.
Visit the USP storefront to see all of our available items—Books, Booklets, CD’s and Posters. Download our Pricelist here.

The USP’s Science and Research Committee and affiliates were once again given the opportunity to contribute two more articles to Mi Mundo Magazine. Darren Colomb contributed to the April 2017 Edition (click on picture below to view).

Rhetta Jacobson, contributed to the June 2017 Edition (click on picture below to view).

As always, a special thanks to Kenny Handkammer for the opportunity to share the work of the amazing Dr. Walter Russell with the world!

Here at the USP, we are continually multiplying our efforts to preserve and protect the Russell Legacy for all posterity. As we carry the torch toward the mountaintop, we welcome you to join us on this mission. Have a blessed day!

Respectfully and faithfully yours,

Matt Presti – President, USP
Dr. Walter Russell and Westinghouse

By, Darren Colomb - C.S.O., USP

There has been much interest in Dr. Walter Russell’s transmutation experiments performed at the Westinghouse Lamp Laboratory in 1927, myself included. Accounts of these groundbreaking experiments captivated and fascinated me when I first read them in “A New Concept of the Universe.”

Dr. Russell had solved for the Bloomfield, New Jersey Westinghouse lab, a problem regarding the structure of Chromium, which he predicted based upon his knowledge of the wave, and in return for his service was granted a private laboratory of his own. With only the use of heat and special solenoid coils, Dr. Russell was able to demonstrate the transmutation of water vapor in a sealed quartz container into 17 differing substances. What you see in the scanned image below is an original copy of ‘gas sample #5’ which shows the results of spectral analysis following one of Dr. Russell’s procedures. In every case when the apparatus was altered or re-set a different element would appear that wasn’t there prior.
Despite this irrefutable proof the scientists at Westinghouse simply could not wrap theirs fixed minds around how something like this could be possible and concluded it must be a leak in the tube, or some other source of contamination. This was disheartening to Russell who asked "where can you get in the world of science when you can show them a thing like that and they still won’t believe you?" Because of this lack of belief or the converse problem of those who believed him but only wanted the ability to obtain gold in any amount, Russell guarded the secret of transmutation very closely however, over the rest of his days he would incrementally disseminate the basic concepts in his lectures, books and explanatory charts for the posterity of future generations. The elements, as he said, are not substances but are tonal like the notes of a harp string. One simply needs to change the pressure or tension of the string to produce different sounds and simply enough, the same is true for the elements of the periodic table.

Russell constructed a novel apparatus consisting of pairs of coils and a structural core, which enabled him to emulate the ‘dual-polarity control’ existent everywhere in Nature’s many effects. Because he possessed this knowledge of Nature’s inner-workings, he was able to find uses for the ‘magnetic field’ of these coil pairs which were entirely unsuspected and unknown. He posited that all matter is controlled entirely by invisible geometric wave fields that produce the various pressures of motion which we call the elements. In this way, every atom of every compressed or expand state of matter has its own specific position in an over-arching wave-form structure which was both periodic and predictable.

He charted all the known and even unknown elements following this 9-octave wave shaft and produced his complete published charts in 1926, which later earned him a conferred Doctorate degree from the Royal Academy of Sciences, although he was denied the Nobel prizes others had won for the ‘discovery’ of deuterium, tritium, Neptunium and Plutonium. In all truth, Dr. Russell was the man who gave humanity the nuclear age and with it the nightmares that follow its abuse and misuse which were not remotely his intentions. He learned much from his early days about the pitfalls of saying too much too soon to men who seek power at the cost of others. As we look ahead to the future, we must be willing to open our hearts and minds to new concepts such as transmutation as they will indeed transform us individually and collectively, and propel our civilization into the coming age of complete control over matter and energy.

The USP wishes you a Merry Summer Solstice!
